Maptaskr
Advanced GIS for Dynamics 365

Geospatial Process Automation

#HigherClientSatisfaction
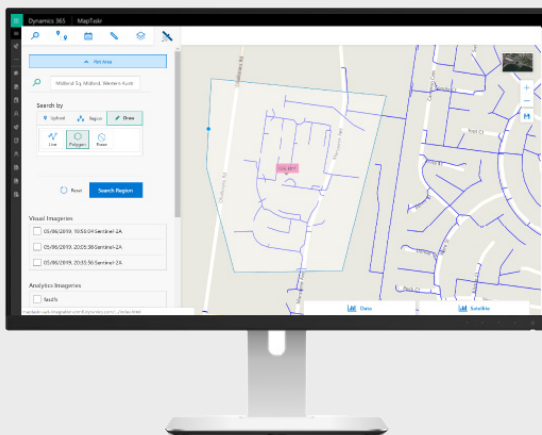

maptaskr ™

Dynamics 365 Integration

Connect your users, customers, assets, locations and enterprise data with interactive maps.

Maptaskr's Location and Geospatial Intelligence Technology is designed to meet the most challenging enterprise environments, aligning business activities with business goals in one unified solution.

Maps make it easier to see correlations between data or to contextualise what's happening on the ground. Maps allow for a kind of communication that goes above and beyond what we can convey orally.

Maps are fast becoming the new search boxes and businesses are switching on to the fact that over 80% of their data contains hidden spatial insights.

Improve and Increase Field Operation Efficiency

- Connect field and office operations with shared data
- Create & share data and maps for those in the field to reference or use for data collection
- Create & manage territories to ensure they are optimised with the correct field staff
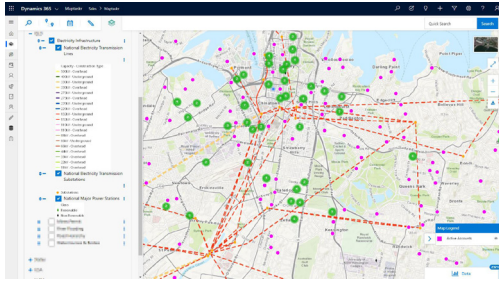

Advanced Geospatial Process Automation

- Set workflows to trigger actions based on live events and feeds
- Monitor locations remotely
- Automate decision-making / actions based on triggers from live external data feeds
- Add geospatial components to workflows, work orders, permits, incidents and more

Integrate Data from Multiple Systems and Sources

- Bring in live data feeds that detail current external conditions naturally, economically & demographically
- Example live feeds include weather, natural disasters, earth systems, traffic, financial, real estate and more
- Bring in data from different providers

Esri ArcGIS Connector

Combine Dynamics 365 and Esri ArcGIS data to gain actionable insights.

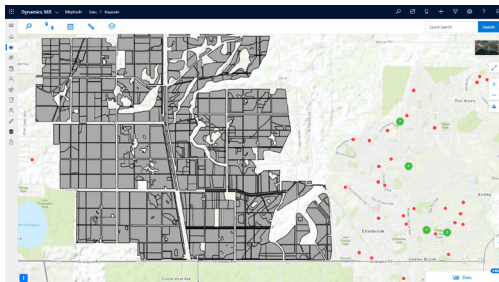

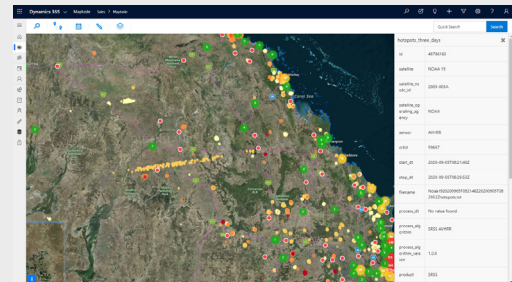

Visualise ArcGIS Data

Visualise Dynamics 365 and existing ArcGIS data using Maptaskr:

- Easily share your ArcGIS data with Dynamics users
- Enable your field staff to take actions by providing them relevant business-critical data
- Put your Dynamics 365 data in context with ArcGIS data

Interact with Data

Enable interaction with ArcGIS data:

- Enable feature selection, search and query
- Support for ArcGIS Feature Server & Map Server
- Support for displaying ArcGIS Symbology

Secured Data

Easily integrate Esri ArcGIS layers securely:

- Connect to ArcGIS Server and ArcGIS Online
- Support for Esri REST Services
- Support for OAuth 2.0

Enable Analytics

Gain better understanding of your data:

- Run Geo-processing rules
- Include real time location-based data
- Integrate location-based services
